

Austin J. Baird PhD

BIOMEDICAL ENGINEERING GROUP LEADER · DISTINGUISHED MEMBER OF THE TECHNICAL STAFF

1416 Dollar Ave, Durham NC, 27701

☎ (801) 792-2582 | ✉ ajbaird86@gmail.com | 🌐 ajbaird | in bairdaustin

Objective

I am a leader in biological modeling and computational mathematics. I'm looking to make a broad impact in the industry and have a strong track record of leadership and project development.

Education

University of North Carolina at Chapel Hill

PHD IN APPLIED MATHEMATICS

Chapel Hill, NC

August 2014

University of California, Santa Cruz

BA IN MATHEMATICS

Santa Cruz, CA

June 2008

Experience

Applied Research Associates, Inc.

Raleigh, NC

BIOMEDICAL MODELING GROUP LEADER (SENIOR ENGINEER, DISTINGUISHED MEMBER OF THE TECHNICAL STAFF)

December 2018 - PRESENT

- Lead a multidisciplinary team across 4 different projects in charge of agile development processes, technical roadmapping and delivery scheduling, direct communication with government customers
- Led and won six million dollars in research and development funds through Defense Health Agency grants
- Lead technical physiology modeler and principal investigator of the BioGears project
- Organized teaming across three research hospitals and multiple small businesses
- Communicate research progress through multiple conferences and peer reviewed publications, including the BioGears 2020 conference
- Oversaw implementation of all models associated with BioGears releases 7.0-7.3

Applied Research Associates, Inc.

Raleigh, NC

STAFF ENGINEER 2

January 2017 - December 2018

- Expanded the BioGears physiology model by adding gastro-intestinal digestion/absorption, diuretic drug, pain stimulus and epinephrine release and many others
- Nominated and won federal innovation award in collaboration with Telemedicine & Advanced Technology Research Center (TATRC) government lab
- Updated the BioGears build library to be hosted on github, modernized development timeline
- Won two government contracts totaling 4 million dollars in additional research and development funding
- Oversaw implementation of all models associated with BioGears releases 6.1-6.3

Applied Research Associates, Inc.

Raleigh, NC

STAFF ENGINEER

February 2016 - January, 2017

- Implemented a new renal system model in the BioGears engine with local autoregulation
- Contributed to updated blood/gas model and matrix circuit solver implementation
- Led validation and unit testing of C++ code base
- Oversaw Jenkins cloud build testing environment including daily reporting and system validation

Webassign

Raleigh, NC

CONTENT DEVELOPER

August 2015 - February 2016

- Created detailed solutions for the differential equation teaching application including step-by-step instructions for support the backend software
- Coordinated content outlines with leadership teams to detail requirements

Duke University

Durham, NC

VISITING ASSISTANT PROFESSOR

August 2014 - August 2015

- Analyzed how pressure changes induced by heart failure affect the hemodynamic and reabsorptive function of the kidney.
- Taught two semesters of introduction to partial and ordinary differential equations, developed all course materials
- Developed computational mathematical model of the kidney and coordinated work with University of Ontario research hospital clinicians. Presented results at experimental biology, Boston MA
- Investigated blood clotting in the renal veins using the immersed boundary method

University of North Carolina, Chapel Hill

Chapel Hill, NC

GRADUATE RESEARCH FELLOW

September 2010 - August 2014

- Developed a fully coupled fluid-structure interaction code in C++ and Python to test the performance of valveless pumping.
- Created a new computational valveless pumping mechanism using muscle cells providing the forcing in the system.
- Presented and work at 12 conferences, domestic and abroad and published results
- Led wet lab organism maintenance and worked with lab-mates to collect particle image velocity data from

Funding Secured

Defense Health Agency

Fredrick, MD

SUSTAIN: PRONLONGED FIELD CARE TRAINING FRAMEWORK

Q3 2018

- *Role*: Lead Physiology Modeler and Proposal Manager
- *Amount*: 2.2 million

Defense Health Agency

Orlando, FL

VIRTUAL PATIENT APPLICATION TO TRAIN THERMAL INJURY

Q2 2017

- *Role*: Principal Investigator
- *Amount*: 2.1 million

Army Research Labs

Raleigh, NC

FAST COMPUTATIONAL SIMULATIONS OF TRAUMATIC BRAIN INJURY

Q1 2017

- *Role*: Principal Investigator
- *Amount*: 353 thousand

Defense Health Agency

Fredrick, MD

BIOGEARS FOLLOW-ON RESEARCH AWARD

Q4 2016

- *Role*: Principal Investigator
- *Amount*: 1.9 million

Projects

BioGears Physiology Engine

C++, ARM, GITHUB, JAVA, PYTHON, XML

Raleigh, NC

Feb 2016 - PRESENT

- A whole body physiology engine programmed in C++
- Lumped parameter physics based circulatory model with compartment overlays for complete systems biology modeling support
- Models include: cardio-pulmonary circulation, drug pharmacokinetic-pharmacodynamics, traumatic brain injury, pneumothorax, urine concentration, blood coagulation, pain stimulus, infection, digestion absorption, and others
- Multi-platform build support and agile process development

BurnCARE Medical Training Application

ANDROID, UNREAL ENGINE 4, C++

Raleigh, NC

Jan 2018 - PRESENT

- Burn care application developed in Unreal Engine 4 for the Android tablet platform
- Modular concept designed to teach individual, unique burn treatment requirements
- Collaborative effort with the U.S. Army Institute of Surgical Research
- Led the grant writing effort and secured 1.8 million dollar grant to fund effort in competitive selection process

Sustain: Prolong Field Care Training Framework

C++, JAVASCRIPT, PYTHON

Raleigh, NC

Jan 2018 - PRESENT

- Modular framework to connect different software critical for prolonged care training
- Scenario builder, Unreal Engine 4 training game, networking code, DDS virtual patient management code, and learning record database portal
- Led the grant writing effort and secured 2.2 million dollar grant to fund effort in competitive selection process
